Interactive Internet Platform

An interactive internet platform has been developed which has been mounted on two different cruise ships; MS Trollfjord which is part of Hurtigruten going from Bergen to Kirkenes and Color Fantasy which is part of Color Line going from Oslo to Kiel. Additional three have been placed at the head office of NIVA in Oslo, at the Environmental Centre at Runde (Runde Miljøsenster) and at an innovative centre in Arendal (Klimapartnere).

The Interactive Internet Platform has covered all key stories. Different modules are included in the platform. Examples are time series of environmental data gathered from various vessels covering the North Sea and the Norwegian Sea, a game developed for the key story Sustainable fisheries, films on invasive species, microplastic and eutrophication in the Baltic developed by the consortium among other things.

The Interactive Internet Platform is available in four different languages; Norwegian, English, German and French.
